How to Reach Us

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are available in print or electronic format. Maps and other geographic reference materials are available for some types of data. In some cases, workshops and seminars have been developed to provide additional information on some subjects.

How to Obtain More Information

Inquiries about products and services should be directed to your local Statistics Canada Reference Centre:

St. John's	(709) 772-4073	Winnipeg	(204) 983-4020
Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations normalisées et spéciales sont disponibles sur support papier ou électronique. Des cartes et d'autres documents géographiques de référence sont disponibles pour certains genres de données. Dans certains cas, des ateliers et des séminaires procurent des renseignements complémentaires sur certains sujets.

Comment obtenir d'autres renseignements

Toutes les demandes de renseignements au sujet des produits et services doivent être adressées au centre de consultation de Statistique Canada de votre région :

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the population of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Note de reconnaissance

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises et les administrations canadiennes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles. Canadian Cataloguing in Publication Data

Preface

This publication is part of The Nation series, a collection of 24 reports containing basic information on a broad range of questions from the 1991 Census of population.

The first four publications in the series present data which were collected from every household in Canada. These data concern demographic, family, household, dwelling, and mother tongue characteristics. The remaining 20 publications contain data collected from a 20% sample of households, and include statistics on demographic, social, cultural and economic characteristics. The geographic coverage in these publications is primarily at the national, provincial and territorial levels, although some data are provided for large metropolitan areas.

Additional statistics on the subjects covered in these publications will be available in other data products, such as the Profiles series, the Dimensions series, Aboriginal Peoples products, Basic Summary Tabulations and Public Use Microdata Files. Together, the products and services from the 1991 Census provide a complete set of current information about Canada and Canadians.

I would like to express my appreciation to the millions of Canadians who completed their questionnaires on June 4, 1991, as well as to all those who assisted Statistics Canada in planning and conducting the census.

Ivan P. Fellegi Chief Statistician of Canada

Préface

La présente publication fait partie de la série «Le pays» qui comprend 24 bulletins dans lesquels se retrouvent des renseignements de base sur un large éventail de questions posées au recensement de la population de 1991.

Les quatre premières publications de la série présentent les données qui ont été recueillies auprès de tous les ménages du Canada. Ces données portent sur des caractéristiques relatives à la démographie, à la famille, au ménage, au logement et à la langue maternelle. Les 20 autres publications contiennent des données recueillies auprès d'un échantillon formé de 20 % des ménages et renferment des statistiques sur des caractéristiques démographiques, sociales, culturelles et économiques. Ces publications présentent surtout des données à l'échelle du Canada, des provinces et des territoires, mais on y trouve également certaines données pour les grandes régions métropolitaines.

Des statistiques supplémentaires sur les sujets traités dans ces publications seront disponibles dans d'autres produits de données tels que les séries «Profils» et «Dimensions», les produits sur les autochtones, les tableaux sommaires de base et les fichiers de microdonnées à grande diffusion. Ensemble, les produits et services du recensement de 1991 procurent des informations récentes et complètes sur le Canada et sa population.

J'aimerais exprimer ma reconnaissance aux millions de Canadiens et Canadiennes qui ont rempli leurs questionnaires le 4 juin 1991 et à tous ceux et celles qui nous ont prêté leur concours en travaillant à la planification et à la réalisation du recensement.

Le statisticien en chef du Canada Ivan P. Fellegi

Highlights

- The Roman Catholic religion continued to be the largest religious group in Canada. In 1991, 45% of the population, some 12.2 million people reported their religion as Roman Catholic.
- Protestant denominations were the second largest major religion category in Canada, accounting for 36% of the population or 9.8 million persons. This was a decrease from 41% in 1981 and 44% in 1971. In 1921, 56% of the population were Protestants and 39% were Roman Catholics.
- Most of the decrease in the Protestant denominations occurred within five of the six most numerous groups. Between 1981 and 1991, decreases were seen in Presbyterian (22%), United Church (18%), Anglican (10%), Lutheran (10%) and Baptist (5%) groups, while the Pentecostal group increased by 29%.
- In contrast to the larger groups, most of the smaller Protestant denominations experienced moderate to high growth between 1981 and 1991 with the largest increases seen in Spiritualist (93%), Evangelical (76%), Christian and Missionary Alliance (75%), Wesleyan (45%) Missionary Church (44%), Moravian (40%), New Apostolic (33%) and Hutterite (30%).
- Protestant denominations which showed moderate increases included Adventist (26%), Brethren in Christ (19%), Free Methodist (16%), Worldwide Church of God (15%), Church of Jesus Christ of Latter-Day Saints (14%), Reformed Bodies (14%) and Unitarian (14%).
- Increases of 7% were reported by the Jewish and Eastern Orthodox religious groups.
- The largest increase occurred in the Eastern Non-Christian religions, which as a whole, increased by 144% between 1981 and 1991. Among this group, the largest increases were for Buddhist (215%), Islam (158%), Hindu (126%) and Sikh (118%).
- The smallest religion major category, the sects, cults and various religions categorized as "para-religious groups", grew by 109% between 1981 and 1991. These groups represented 28,160 persons or 0.1% of the population.
- Persons who reported "No religion" numbered 3.3 million in 1991, a 90% increase from 1981.

Faits saillants

- La religion catholique romaine continue de former le plus grand groupe religieux au Canada. En 1991, 45 % de la population, soit 12,2 millions de personnes, a déclaré la religion catholique romaine.
- Les confessions protestantes représentaient le deuxième plus grand groupe religieux au Canada, soit 36 % de la population ou 9,8 millions de personnes. Il s'agit d'une diminution par rapport à 41 % en 1981 et à 44 % en 1971. En 1921, 56 % de la population était protestante et 39 % était catholique romaine.
- La majeure partie de la diminution observée au sein des confessions protestantes est survenue parmi cinq des six groupes les plus nombreux. De 1981 à 1991, on a enregistré des diminutions dans les religions presbytérienne (22 %), Église unie (18 %), anglicane (10 %), luthérienne (10 %) et baptiste (5 %), tandis que le groupe de confession pentecôtiste s'est accru de 29 %.
- Contrairement aux grands groupes, la plupart des plus petites confessions protestantes ont connu des croissances allant de moyenne à élevée de 1981 à 1991; on a enregistré les plus fortes augmentations au sein des confessions spiritualiste (93 %), évangélique (76 %), alliance chrétienne et missionnaire (75 %), wesleyenne (45 %), Église missionnaire (44 %), morave (40 %), apostolique nouvelle (33 %) et huttérite (30 %).
- Les confessions protestantes qui ont connu des augmentations moyennes comprenaient les confessions adventiste (26 %), frères dans le Christ (19 %), méthodiste libre (16 %), Worldwide Church of God (15 %), Église de Jésus-Christ des Saints des Derniers Jours (14 %), Église réformée (14 %) et unitarienne (14 %).
- On a enregistré des accroissements de 7 % dans les groupes de religion juive et orthodoxe orientale.
- La plus forte augmentation est survenue dans les religions non chrétiennes orientales, qui, dans l'ensemble, se sont accrues de 144 % de 1981 à 1991. Dans ce groupe, les plus fortes hausses ont été observées dans les religions bouddhiste (215 %), islamique (158 %), hindoue (126 %) et sikh (118 %).
- Le plus petit groupe religieux, qui comprend les sectes, les cultes et diverses religions, catégorisé comme «groupes parareligieux», s'est accru de 109 % de 1981 à 1991. Ce groupe représentait 28 160 personnes, soit 0,1 % de la population.
- Le nombre de personnes qui ont déclaré n'avoir «aucune religion» atteignait 3,3 millions en 1991, soit une augmentation de 90 % depuis 1981.

- Although most persons who reported no religious affiliation simply indicated "No religion" a small number reported that they were Agnostic (21,970) or Atheist (13,510).
- New religions which appeared in the 1991 Census were Vineyard Christian Fellowship (1,200), Jains (1,410), Shinto (445), Zoroastrian (3,185), Scientology (1,220), New Age (1,200) and Humanist (1,245).
- Persons affiliated with the Unitarian religion had the highest average age (42.1 years), while persons affiliated with the Hutterite religion had the lowest (24.2 years).
- Among young persons aged 15-17, those affiliated with the Hindu religion had the highest proportion attending school full-time (92%), while young people affiliated with the Hutterite religion had the lowest (18%).

- Même si la majorité des personnes n'ayant aucune affiliation religieuse ont tout simplement indiqué «aucune religion», un petit nombre d'entre elles ont déclaré qu'elles étaient agnostiques (21 970 personnes) ou athées (13 510 personnes).
- Lors du Recensement de 1991, de nouvelles religions sont apparues: Vineyard Christian Fellowship (1 200 personnes), djain (1 410 personnes), shintoïste (445 personnes), zoroastrienne (3 185 personnes), scientologie (1 220 personnes), nouvel âge (1 200 personnes) et humaniste (1 245 personnes).
- On observait l'âge moyen le plus élevé chez les personnes de confession unitarienne (42,1 ans), tandis que les personnes de confession huttérite enregistraient l'âge moyen le plus faible (24,2 ans).
- Parmi les jeunes âgés de 15 à 17 ans, ceux de confession hindoue avaient la plus forte proportion fréquentant l'école à plein temps (92,0 %), tandis que ceux de confession huttérite avaient la plus faible (18 %).

Introduction

This publication presents basic distributions of religions in Canada, provinces and territories, and census metropolitan areas. The religion data are also cross-classified by selected demographic and social characteristics. The classification of the religion data is based on the major group structure introduced in the 1981 Census. According to this system, the seven major religious groups are:

- 1. Catholic
- 2. Protestant
- 3. Eastern Orthodox
- 4. Jewish
- 5. Eastern Non-Christian
- Para-religious group
- 7. No Religious Affiliation

All of the above groups, except the Jewish category, are further classified according to a number of sub-groups. The Catholic category contains four such sub-groups, while the Protestant category contains 56 sub-groups. The Eastern Orthodox category contains nine sub-groups. The Eastern Non-Christian category has 11 sub-groups, the four main ones being, Islam, Buddhist, Hindu and Sikh. The Para-religious category has 11 sub-groups and finally the No Religious Affiliation category has six sub-groups.

Organization of the Publication

This publication contains a mixture of historical and current statistics. Tables 1, 2, 6, 7 and 8 relate solely to 1991 only, while Tables 3, 4 and 5 exhibit both 1981 and 1991 data. Tables 1, 2, 5 and 8 display data for Canada, provinces and territories, while Tables 3, 4 and 6 show data only for Canada. Table 2 also shows religion distributions for census metropolitan areas. It should be noted that all tables include the non-permanent resident population (NPR) for the 1991 Census. The 1981 Census did not include the NPR population.

Introduction

La présente publication présente les répartitions fondamentales des religions au Canada, dans les provinces et les territoires, ainsi que dans les régions métropolitaines de recensement. Les données sur les religions sont également recoupées par caractéristiques démographiques et sociales choisies. Le classement des données sur les religions est basé sur la structure par grands groupes introduite au recensement de 1981. Ce système permet de dégager sept grands groupes religieux suivants :

- 1. Catholique
- 2. Protestant
- 3. Orthodoxe oriental
- 4. Juif
- 5. Non chrétien oriental
- 6. Groupes parareligieux
- 7. Aucune religion

Tous les groupes susmentionnés, sauf le groupe juif, font l'objet d'un classement plus précis selon différents La catégorie catholique sous-groupes. quatre sous-groupes de ce type, tandis que la catégorie protestante contient 56 sous-groupes. La catégorie orthodoxe orientale renferme neuf sous-groupes. chrétienne orientale possède catégorie non. principaux 11 sous-groupes. les quatre étant les sous-groupes islamique, bouddhiste, hindou et sikh. Les groupes parareligieux consistent en 11 sous-groupes, et finalement la catégorie «aucune religion» possède six sous-groupes.

Structure de la publication

La présente publication renferme un mélange de statistiques chronologiques et courantes. Les tableaux 1, 2, 6, 7 et 8 se rapportent uniquement à 1991, alors que les tableaux 3, 4 et 5 présentent des données tirées tant de 1981 que de 1991. Les tableaux 1, 2, 5 et 8 montrent des données pour le Canada, les provinces et les territoires, tandis que les tableaux 3, 4 et 6 présentent des données uniquement pour le Canada. Le tableau 2 indique également la répartition des religions au sein des régions métropolitaines de recensement. Il convient de noter que tous les tableaux comprennent les résidents non permanents (RNP) au recensement de 1991. Le recensement de 1981 n'incluait pas les RNP.

Table Descriptions

Table 1 is the most detailed religion table showing all of the religions that were coded during the 1991 Census. Some of the newer religions added to the 1991 Census include the Christian Vineyard Fellowship and the Zoroastrians. These newer religions are not included in the 1991 Census Dictionary (Catalogue No. 92-301E). For the purposes of completing the classification, the Vineyard Christian Fellowship is subsumed within the Protestant main category while the Zoroastrians are subsumed within the Eastern Non-Christian group. Users interested in historical (1971, 1981, 1991) comparisons should consult Appendix 3.

Table 2 shows a summarized religion distribution for Canada, provinces and territories, and census metropolitan areas. This table does not provide as much detail as Table 1, but it does effectively demonstrate the variations in religions according to the major metropolitan areas of Canada.

Table 3 shows the age group distribution of the main religions as well as selected minor sub-group religions. This table is published at the Canada level only. It contains both 1981 and 1991 figures as well as summary statistics on average age of each of the religion groups.

Table 4 shows the variations in school attendance rates by religion for the population 15 years of age and over, by sex and age. The table also shows how these rates changed between 1981 and 1991.

Table 5 shows the distributions of highest level of schooling by religion for the population 25 to 44 years of age.

Table 6 is a cross-classification of religion and ethnic origin.

Table 7 is a cross-classification of religion and mother tongue.

Table 8 allows for an analysis of the relationship between religion and immigration status.

Content Considerations

Counts of the population, households, dwellings or families shown in tabulations based on a 20% sample may differ from those collected on a 100% basis for the following reasons:

Description des tableaux

Le **tableau 1** représente le tableau le plus détaillé des religions. Il renferme toutes les religions qui ont reçu un code pour le recensement de 1991. Parmi les nouvelles religions ajoutées au recensement de 1991, mentionnons le «Christian Vineyard Fellowship» et les zoroastriens. Ces nouvelles religions ne sont pas comprises dans le Dictionnaire du recensement de 1991 (n° 92-301F au catalogue). Aux fins de la classification, le «Christian Vineyard Fellowship» est inclus dans la catégorie principale «protestante», tandis que les zoroastriens sont inclus dans le groupe des religions non chrétiennes orientales. Les utilisateurs intéressés à établir des comparaisons dans le temps (1971, 1981, 1991) doivent se rapporter à l'annexe 3.

Le tableau 2 présente une répartition sommaire des religions pour le Canada, les provinces, les territoires et les régions métropolitaines de recensement. Ce tableau n'est pas aussi détaillé que le tableau 1, mais il montre clairement les différences au niveau des religions entre les principales régions métropolitaines du Canada.

Le tableau 3 indique la répartition par groupes d'âge des principales religions, ainsi que de certains sous-groupes religieux mineurs. Ce tableau contient des données uniquement pour le Canada. Il renferme des chiffres tant pour 1981 que pour 1991, ainsi que des statistiques sommaires portant sur l'âge moyen au sein de chacun des groupes religieux.

Le **tableau 4** fait état des différences au niveau des taux de fréquentation scolaire selon la religion pour la population âgée de 15 ans ou plus, en tenant compte du sexe et de l'âge. Le tableau montre également à quel point ces taux ont changé entre 1981 et 1991.

Le **tableau 5** indique comment se répartit le plus haut niveau de scolarité atteint selon la religion pour la population âgée de 25 à 44 ans.

Le **tableau 6** représente un classement recoupé de la religion et de l'origine ethnique.

Le **tableau 7** représente un classement recoupé de la religion et de la langue maternelle.

Le **tableau 8** permet d'analyser la relation entre la religion et le statut d'immigrant.

Considérations relatives au contenu

Les chiffres de la population, des ménages, des logements ou des familles dans les totalisations utilisant les données-échantillon (20 %) peuvent différer des données intégrales pour les raisons suivantes :

- (1) The exclusion of institutional residents: Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as residences for senior citizens, hospitals, correctional and penal institutions. Detailed sample data were not collected from this sector of the population.
- (2) Weighting: Data collected on a sample basis were weighted up to provide estimates of the entire population excluding institutional residents. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6940.

Users should also be aware that differences in counts may be due to the different subpopulations or universes for which the data are reported. For example, mobility data are reported for persons 5 years and over for the 5 year interval data and 1 year and over for the 1 year interval data, excluding those temporarily residing overseas; education and labour force data are reported for persons 15 years and over. Furthermore, data may be produced for subsets of these education and labour universes such as total labour force, employed labour force, etc. Similar differences may occur in tabulations for households, dwellings or families. The 1991 Census Dictionary (Catalogue No. 92-301E) provides more detailed information on universes or subpopulations by variable.

Some Indian reserves and Indian settlements were incompletely enumerated during the 1986 and/or 1991 Censuses (see "Special Notes"). These reserves and settlements are identified in Appendix 1.

- (1) L'exclusion des pensionnaires d'un établissement institutionnel: Ces derniers sont définis comme les personnes autres que les membres du personnel et leur famille qui vivent dans des logements collectifs institutionnels tels que les foyers pour personnes âgées, les hôpitaux, les établissements de correction et établissements pénitentiaires. On n'a pas recueilli de données-échantillon détaillées pour ce secteur de la population.
- Les données-échantillon sont Pondération : pondérées afin d'obtenir des estimations de la population tout entière à l'exclusion des pensionnaires d'un établissement institutionnel. Cependant, les chiffres pondérés se caractérisent par la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les totalisations contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques ayant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations. Pour de plus amples renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613)951-6940.

Les utilisateurs doivent également noter que les différences de chiffres peuvent s'expliquer par les différentes sous-populations ou univers pour lesquels les données sont publiées. Ainsi, les données sur la mobilité (période de cinq ans) sont déclarées pour les personnes âgées de cinq ans et plus et les données sur la mobilité (période de un an) sont déclarées pour les personnes âgées de un an et plus, excluant celles qui résident temporairement outre-mer; les données sur la scolarité et la population active ne sont déclarées que pour les personnes âgées de 15 ans et plus. De plus, des données peuvent être produites pour les sous-ensembles de ces univers de la scolarité et du travail tels que la population active totale, la population active occupée, etc. Des différences similaires peuvent se glisser dans les totalisations pour les ménages, les logements ou les familles. Le Dictionnaire du recensement de 1991 (nº 92-301F au catalogue) contient plus de renseignements détaillés sur les univers ou les sous-populations par variable.

Certaines réserves indiennes et établissements indiens n'ont été que partiellement dénombrés lors des recensements de 1986 et/ou de 1991 (voir «Notes spéciales»). Ces réserves et ces établissements sont indiqués à l'annexe 1. Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

Additional information on content considerations, definitions of terms, explanations of data quality, etc., may also be found at the end of this publication, immediately following the data tables. (This information is presented separately in English and in French sections for easier use.)

Symbols

The following standard symbols may be found in Census products.

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- -- Amount too small to be expressed.

XXX Figures suppressed to protect confidentiality.

- ** The median could not be calculated as it occurred in an open-ended class.
- Land area is included in neighbouring census subdivision.
- An error exists in the 1991 counts for this census subdivision (CSD). For further information, see the "Special Notes" section.
- A Adjusted figure due to boundary change.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

Vous trouverez également à la fin de la présente publication, immédiatement après les tableaux de données, d'autres informations sur les considérations relatives au contenu, à la définition de termes, à la qualité des données, etc. (Ces informations sont présentées séparément en français et en anglais pour en faciliter l'usage.)

Signes conventionnels

Les signes conventionnels suivants peuvent être retrouvés dans les produits du recensement.

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- Nombres infimes.

XXX Nombres supprimés afin de protéger la confidentialité.

- ** Il est impossible de calculer la médiane car elle se trouve dans une des classes ouvertes de répartition utilisée pour calculer la médiane.
- La superficie est comprise dans la subdivision de recensement avoisinante.
- Une erreur a été relevée dans les chiffres de 1991 pour cette subdivision de recensement (SDR). Pour plus de renseignements, voir la section «Notes spéciales».
- A Chiffre ajusté à cause de changement de limite.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

Definitions

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the 1991 Census Dictionary (Catalogue No. 92-301E) for the full definitions and additional remarks related to these concepts and definitions.

Age

Refers to the age at last birthday (as of the census reference date, June 4, 1991). This variable is derived from the date of birth question which asks day, month and year of birth. Persons who were unable to give the exact date of birth were asked to give the best possible estimate.

Census Metropolitan Area (CMA)

The general concept of a census metropolitan area (CMA) is one of a very large urban area, together with adjacent urban and rural areas which have a high degree of economic and social integration with that urban area.

A CMA is delineated around an urban area (called the urbanized core and having a population of at least 100,000, based on the previous census). Once an area becomes a CMA, it is retained in the program even if its population subsequently declines.

Smaller urban areas, centred on urbanized cores of a population of at least 10,000, are included in the census agglomeration (CA) program.

Ethnic origin

Refers to the ethnic or cultural group(s) to which the respondent's ancestors belong.

Highest Level of Schooling

Refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university completed. University education is considered to be above other non-university. Also, the attainment of a degree, certificate or diploma is considered to be at a higher level than years completed or attended without an educational qualification.

Immigrant Population

Refers to persons who are, or have been, landed immigrants in Canada. A landed immigrant is a person who is not a Canadian citizen by birth, but who has been granted the right to live in Canada permanently by Canadian immigration authorities.

Mother Tongue

Refers to the first language learned at home in childhood and still understood by the individual at the time of the census.

Province

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified.

Religion

Refers to specific religious denominations, groups or bodies as well as sects, cults, or other religiously defined communities or systems of belief.

School Attendance

Refers to either full-time or part-time (day or evening) attendance at school, college or university during the nine-month period between September 1990 and June 4, 1991. Attendance is counted only for courses which could be used as credits towards a certificate, diploma or degree.

Sex

Refers to the gender of the respondent.

Territory

Refers to two major political divisions of Canada, namely Yukon Territory and Northwest Territories. From a statistical point of view, these territories are equivalent to provinces, i.e. a basic unit for which data are tabulated and cross-classified.

Data Quality

General

The 1991 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- coverage errors, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- non-response errors, which result when responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- response errors, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- processing errors, which can occur at various steps including: coding, when "write-in" responses are transformed into numerical codes; data capture, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and imputation when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- sampling errors, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Coverage Errors

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in undercoverage. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can

occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1991, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant was revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households and persons missed because their dwelling was incorrectly classified as vacant. Second, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province and territory, the magnitude of this residual undercoverage in the 1991 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. The fourth study, known as Overcoverage Study, is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

Other Non-Sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensure as complete a response as possible. Census representatives edit the questionnaires and follow up on missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses is still missing. Although missing entries are eliminated during processing by replacing a missing value by the corresponding entry for a "similar" record, there remain some potential non-response errors. This is particularly serious if the non-respondents differ in some respects from the respondents, since this procedure will result in non-response bias.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire, such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a written response. During processing, these "write-in" entries are given a numeric code. **Coding errors** can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of the codes and taking corrective action where necessary. For the first time in 1991, much of the coding was automated, partly in an effort to reduce the extent of coding errors.

The information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of data capture errors. First, certain edits (such as range checks) are performed as the data are keyed. Second, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a "donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any imputation errors will more or less cancel out when results are tabulated for a sufficiently large geographic area or population subgroup.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1991 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1991 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth), the responses obtained in the 1991 Census, for a sample of individuals, are being compared with those for the same individuals in the 1986 Census. Also, following the 1991 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and marital status; the responses will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

Sampling Errors

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values, the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values, this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so-called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Table: Approximate Standard Error Due to Sampling for 1991 Census Sample Data

Cell Value	Approximate Standard Error
50 or less	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	· 140
10,000	200
20,000	280
50,000	450
100,000	630
500,000	1400

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value corresponding to the cell value that is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000, the range would be 1,000 \pm 3 \times 65 or 1,000 \pm 195).

The standard errors given in the table above will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1991 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table may, therefore, understate or overstate the error due to sampling.

For further information on the quality of census data, contact the Social Survey Methods Division at Statistics Canada, Ottawa, Canada KIA 0T6 (613) 951-6940.

Confidentiality and Random Rounding

The figures shown in the tables have been subjected to a confidentiality procedure known as "random rounding". This is done to prevent the possibility of associating statistical data with any identifiable individual. Under this method, all figures including totals are randomly rounded either up or down to a multiple of "5", and in some cases "10". While providing strong protection against disclosure, this technique does not add significant error to the census data. However, there are some consequences for the users. Since totals are independently rounded, they do not necessarily equal the sum of individually rounded figures in distributions. Also, minor differences can be expected in corresponding totals and cell values in various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add up to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. It should also be noted that small cell counts may suffer a significant distortion as a result of random rounding. Individual data cells containing small numbers may lose their precision as a result.

Users should be aware of possible data distortions when they are aggregating these rounded data. Imprecisions as a result of rounding tend to cancel each other out when data cells are reaggregated. However, users can minimize these distortions by using, whenever possible, the appropriate subtotals when aggregating.

For those requiring maximum precision, the option exists to use custom tabulations. With custom products, aggregation is done using individual census database records. Random rounding occurs only after the data cells have been aggregated, thus minimizing any distortion.

In addition to random rounding, **area suppression** has been adopted to further protect the confidentiality of individual responses.

Area suppression results in the deletion of all characteristic data for geographic areas with populations below a specified size. The extent to which data are suppressed depends upon the following factors:

- if the data are tabulated from the 100% database, suppression is based upon the total population;
- if the data are tabulated from the 20% sample database, suppression is based upon the non-institutional population;
- if the data contain an income distribution, those areas with populations below 250 persons are suppressed;
- if the data do not contain an income distribution, those areas with a population of less than 40 persons are suppressed.

In all cases, suppressed data are included in the appropriate higher aggregate subtotals and totals.

This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary tabulations, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Sampling and Weighting

The 1991 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. Note that, on most Indian reserves and remote areas, all data were collected on a 100% basis.

For any given geographic area, the weighted population, household, dwelling or family total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

Special Notes

Population Counts Based on Usual Residence

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada, as well as those considered "non-permanent residents" (see note on this group). In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

Incompletely Enumerated Indian Reserves and Indian Settlements

On some Indian reserves and Indian settlements in the 1991 Census, enumeration was not permitted or was interrupted before it could be completed. Moreover, some Indian reserves and Indian settlements were enumerated late or the quality of the collected data was considered inadequate. These geographic areas (a total of 78) are called incompletely enumerated Indian reserves and Indian settlements.

Data for 1991 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves and settlements are therefore noted accordingly. Because of the missing data, users are cautioned that for the affected geographic areas, comparisons (e.g., percentage change) between 1986 and 1991 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can be significant for smaller areas, where the affected reserves and settlements account for a higher proportion of the population.

A list of incompletely enumerated Indian reserves and Indian settlements along with Population and Occupied Private Dwelling Counts from the last two censuses (where available) has been compiled and is shown in Appendix 1.

Non-permanent Residents

In 1991, for the first time, the census of population included both permanent and non-permanent residents of Canada. Non-permanent residents are persons who hold student or employment authorizations, Minister's permits or who are refugee claimants.

Prior to 1991, only permanent residents of Canada were included in the census. (The only exception to this was 1941.) Non-permanent residents were considered foreign residents and were not enumerated.

Today in Canada, non-permanent residents make up a growing segment of the population. Their presence can affect the demand for such government services as health care, schooling and employment programs. The inclusion of non-permanent residents in the 1991 Census will also facilitate comparisons with provincial and territorial statistics (marriages, divorces, births and deaths) which include this population. In addition, the census definition is now closer to the United Nations' recommendation that long-term residents (persons living in a country for one year or longer) be enumerated.

Total population counts, as well as counts for all variables, will be affected by this change in the 1991 Census universe. According to the 1991 Census, there were 223,410 non-permanent residents in Canada, representing slightly less than 1% of the total population. Users should be especially careful when comparing data from 1991 and previous censuses in geographic areas where there is a concentration of non-permanent residents. These include the major metropolitan areas of Ontario, British Columbia and Quebec. The population distribution of non-permanent residents for the provinces,

territories and census metropolitan areas is shown in Appendix 2.

Although every attempt was made to enumerate non-permanent residents, the completeness of enumeration of this population was below that achieved for permanent residents. Factors such as language difficulty and a reluctance to complete a government form or understand the need to participate, may have affected the enumeration of non-permanent residents and resulted in undercounting.

Other Related Products

The 1991 Census product line is designed to serve the diverse needs of our users. A wide range of products and services are available from the 1991 Census of Population. They are organized into five categories:

- (1) Reference Products are designed to make census products and services easier to use by helping clients identify their needs and to find and interpret the data.
- (2) Data Products present a wide range of census data for standard geographical areas, covering social, cultural and economic characteristics of Canadians.
- (3) Analytical Products provide an interpretation of the 1991 Census data covering a variety of topics or themes, and present the findings in easy-to-read publications.
- (4) **Tabulation Services** provide tabulations aimed at meeting users' needs in a more detailed or specific form than is available in standard products.
- (5) Workshops and Seminars are offered to inform new and current data users about census data and to assist them in maximizing the value of census data to meet their needs.

To obtain more detailed information on the products and services available from the census, refer to the 1991 Census Catalogue, Catalogue No. 92-302E. As well, you may contact your nearest Regional Reference Centre listed in the "Contacts" section of this publication.

Listed below are other products with presentation and content similar to this publication. (Note: Not all publications are available for purchase. Copies may be referenced through the Regional Reference Centres or Depository Libraries.)

Other Religion Data Products

There are several other products from the 1991 Census which contain religion data. These include:

Basic Summary Tabulations

This series is designed to meet the needs of users who wish to study the characteristics of small areas. Tables provide information on a variety of census variables. The following religion table is available:

R9101 Population by Religion, Showing Age Groups

Area Profile Series

This series gives a statistical overview (including a basic religion variable) of the population of detailed geographic areas. The geographic areas include census divisions (CDs), census subdivisions (CSDs), census metropolitan areas (CMAs), census agglomerations (CAs), federal electoral districts (FEDs), urban and rural areas, and enumeration areas (EAs).

Dimensions Series

These publications present statistical information on themes of considerable public interest. Some publications look at historical trends, while others profile subpopulations such as ethnic, immigrant or language groups.

94-311 Profile of Ethnic Groups, 1991

This publication contains one table showing selected (single) ethnic origins cross-classified by religion. This table contains more detail on ethnic origins than is shown in the present publication.

94-312 Profile of the Immigrant Population, 1991

This publication presents data on selected characteristics (such as religion and language) of the immigrant population. The data are cross-classified by period of immigration and sex; data on the non-immigrant population and non-permanent residents are also presented.

94-318 Profile of Language Groups, 1991

This publication profiles about 20 selected language groups, defined on the basis of mother tongue. Religion information will probably be included in the list of characteristics shown.

Focus on Canada Series

This is a series of descriptive analytical publications that looks at current social economic and demographic characteristics of the Canadian population. The intent is to provide easy-to-read text and statistical findings.

96-314 The Religions of Canadians: A Focus on Canada Study

This study provides a portrait of religious affiliation in Canada, showing trends and changes in the composition of religious groups.

Regional Reference Centres

Statistics Canada's Regional Reference Centres provide a full range of census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase publications, microcomputer diskettes, microfiche, maps and more.

The staff of the Regional Reference Centres provides consultative and research services in addition to providing after-sales service and support, including seminars and workshops on the use of Statistics Canada information.

Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems CANSIM and E-STAT. A telephone inquiry service is also available with toll-free numbers for regional users outside local calling areas. Call, write, fax or visit the nearest Regional Reference Centre for more information.

Additional References and Services

In addition to being available through Regional Reference Centres and depository libraries, Statistics Canada publications may be ordered through your local bookstore or subscription agent. Contact the nearest Regional Reference Centre for a list of Canadian outlets available, or consult the 1991 Census Catalogue (Catalogue No. 92-302E).

Secondary distributors offer data access and analytical support through a variety of consulting and computer-based services not available at Statistics Canada. The names and addresses of licensed distributors may be obtained from any Regional Reference Centre.

Statistics Canada provides digital geographic products which allow computer manipulation of geographic data. A customized retrieval service is available for users who wish to define their own geographic area of study. A variety of data retrieval files and services provide flexibility in selecting a geographic base.

A complete description of available digital files and services is documented in the 1991 Census Catalogue (Catalogue No. 92-302E).

Information concerning census of agriculture products and services may be found in the 1991 Census of Agriculture Products and Services publication, Catalogue No. 92-303, or by calling toll free 1-800-465-1991.

Users with special data requirements may request post-census survey services. Data are made available on microcomputer diskettes for use with spreadsheet software, or on paper output. For additional information, please contact the nearest Regional Reference Centre.

CANSIM. Statistics Canada's computerized database network and information retrieval service provides users with access to current and historical statistics in various forms including specialized data manipulation and analysis packages, graphics facilities and a bibliographic search service. For more information about CANSIM, contact the Marketing Division or any Regional Reference Centre.

Définitions

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1991** (nº 92-301F au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

Âge

Âge au dernier anniversaire de naissance (à la date de référence du recensement, soit le 4 juin 1991). Cette variable est établie d'après la réponse à la question sur la date de naissance qui demande le jour, le mois et l'année de naissance. Les personnes qui ne connaissaient pas la date exacte de leur naissance devaient donner la meilleure estimation possible.

Fréquentation scolaire

Fréquentation à plein temps ou à temps partiel (le jour ou le soir) d'une école, d'un collège ou d'une université au cours de la période de neuf mois allant de septembre 1990 au 4 juin 1991. La fréquentation est comptée seulement pour les cours permettant d'accumuler des crédits en vue de l'obtention d'un certificat, d'un diplôme ou d'un grade.

Langue maternelle

Première langue apprise à la maison dans l'enfance et encore comprise par le recensé au moment du recensement.

Origine ethnique

Groupe(s) ethnique(s) ou culturel(s) auquel (auxquels) appartenaient les ancêtres du répondant.

Plus haut niveau de scolarité atteint

Dernière année d'études primaires ou secondaires, terminée ou non, ou dernière année universitaire ou non universitaire terminée. Dans la hiérarchie de la scolarité, les études universitaires sont classées au-dessus des autres études non universitaires. En outre, la personne qui a obtenu un grade, certificat ou diplôme se trouve classée à un échelon au-dessus de celle qui a un nombre d'années de scolarité plus élevé, terminées ou non, mais qui n'a pas de titre scolaire.

Population des immigrants

Personnes ayant le statut d'immigrant reçu au Canada, ou l'ayant déjà eu. Un immigrant reçu est une personne qui n'a pas la citoyenneté canadienne par naissance, mais à laquelle les autorités canadiennes de l'immigration ont accordé le droit de vivre au Canada en permanence.

Province

Principale division politique du Canada. Du point de vue statistique, il s'agit d'une unité de base selon laquelle les données sont totalisées et recoupées.

Région métropolitaine de recensement (RMR)

Le concept général de région métropolitaine de recensement (RMR) s'applique à un grand noyau urbain ainsi qu'aux régions urbaines et rurales adjacentes dont le degré d'intégration économique et sociale avec ce noyau urbain est très élevé.

Une RMR est délimitée à partir d'un noyau urbanisé lorsque ce dernier compte au moins 100,000 habitants, d'après les résultats du dernier recensement. Lorsqu'une région devient une RMR, elle continue de faire partie du programme même si, ultérieurement, elle subit une baisse de population.

Les régions urbaines de plus petite taille, dont le noyau urbanisé compte au moins 10,000 habitants, sont comprises dans le programme des agglomérations de recensement (AR).

Religion

Confession religieuse ou appartenance à un groupe ou organisme religieux, à une secte, à un culte ou à toute autre collectivité ayant adopté une religion ou un système de croyances quelconque.

Sexe

Qualité d'homme ou de femme.

Territoire

Il s'agit de deux grandes divisions politiques du Canada, soit le Territoire du Yukon et les Territoires du Nord-Ouest. Du point de vue statistique, ces territoires sont l'équivalent des provinces, c'est-à-dire une unité de base pour laquelle des données sont totalisées et recoupées.

Qualité des données

Généralités

Le recensement de 1991 a été une entreprise complexe et de grande envergure. Bien que l'on ait déployé des efforts considérables pour assurer le respect des normes élevées tout au cours des opérations de la collecte et du traitement, il est inévitable que les estimations résultantes soient entachées d'erreurs. Il faut que les utilisateurs des données du recensement sachent que ces erreurs existent et qu'ils aient une idée générale de ses principales composantes afin d'être en mesure de déterminer si les données produites peuvent leur être utiles et d'évaluer les risques auxquels ils s'exposent en tirant des conclusions ou en prenant des décisions à partir de ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, depuis la préparation des documents jusqu'au traitement des données, en passant par l'établissement des listes de logements et la collecte des données. Certaines erreurs, qui surviennent plus ou moins au hasard, ont tendance à s'annuler lorsque les réponses fournies par les divers répondants sont agrégées pour un groupe assez important. Dans le cas des erreurs de cette nature, l'estimation correspondante sera d'autant plus précise que le groupe visé

sera grand. C'est pourquoi on conseille aux utilisateurs de faire preuve de prudence lorsqu'ils utilisent des estimations relatives à de petits groupes. Toutefois, certaines erreurs peuvent survenir de façon plus systématique et introduire un «biais» dans les estimations. Comme ce biais persiste quelle que soit la taille du groupe pour lequel les réponses sont agrégées et comme il est particulièrement difficile d'en mesurer l'importance, les erreurs systématiques posent pour la plupart des utilisateurs de données des problèmes plus graves que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants :

- les erreurs de couverture qui se produisent lorsqu'on oublie des logements et/ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les erreurs dues à la non-réponse qui surviennent lorsque l'on n'a pu obtenir de réponses d'un petit nombre de ménages et/ou de personnes en raison d'une absence prolongée ou pour toute autre raison;
- les erreurs de réponse qui surviennent lorsque le répondant, ou parfois le recenseur, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les erreurs de traitement qui peuvent se produire à diverses étapes, notamment au codage, lorsque les réponses en lettres sont converties en codes numériques; à la saisie des données, lorsque les préposés à l'entrée des données transfèrent sur bandes pour ordinateur les réponses figurant au questionnaire du recensement; à l'imputation, lorsqu'une réponse «valide», mais pas nécessairement exacte, est insérée dans un enregistrement par l'ordinateur pour remplacer une réponse manquante ou «invalide» («valides» et «invalides» renvoient à la cohérence de la réponse, compte tenu des autres renseignements compris dans l'enregistrement);
- les erreurs d'échantillonnage qui s'appliquent uniquement aux questions supplémentaires figurant dans le questionnaire complet distribué à un échantillon de un cinquième des ménages; elles résultent du fait que les réponses à ces questions, une fois pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats que l'on aurait obtenus si l'on avait posé ces questions à tous les ménages.

Les types d'erreur mentionnés plus haut ont tous une composante aléatoire et une composante systématique. Toutefois, la composante systématique de l'erreur d'échantillonnage est d'ordinaire très petite comparativement à sa composante aléatoire. Dans le cas des autres erreurs non dues à l'échantillonnage, tant la composante aléatoire que la composante systématique peuvent être importantes.

Erreurs de couverture

Les erreurs de couverture ont une incidence directe sur la précision des chiffres du recensement, c'est-à-dire sur la taille des divers univers du recensement : la population, les familles, les ménages et les logements. Bien que des mesures aient été

prises pour corriger certaines erreurs identifiables, les chiffres définitifs sont toujours entachés d'une certaine erreur découlant du fait que des personnes ou des logements ont été oubliés, englobés à tort dans le recensement ou comptés deux fois.

L'oubli de logements ou de personnes se traduit par un sous-dénombrement. Des logements peuvent être oubliés en raison d'une mauvaise interprétation des limites du secteur de dénombrement (SD), ou du fait qu'ils sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées parce que leur logement est oublié ou classé comme inoccupé ou quand certains membres du ménage sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Enfin, certaines personnes peuvent être oubliées parce qu'elles n'ont pas de domicile habituel et qu'elles n'ont pas passé la nuit du recensement dans un logement.

Le dénombrement à tort ou le double compte de logements ou de personnes se traduit par un surdénombrement. Il peut y avoir surdénombrement des logements lorsque des constructions impropres à l'habitation sont classées comme logements ou lorsque des unités d'habitation ne répondant pas à la définition du logement retenue pour les fins du recensement sont comptées séparément plutôt que d'être considérées comme faisant partie d'un logement plus grand. Il peut y avoir double compte des logements lorsqu'il existe, par exemple, une certaine ambiguïté au sujet des limites des SD. Les personnes peuvent être comptées deux fois parce que leur logement a été compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. À l'occasion, il arrive qu'une personne ne faisant pas partie de l'univers du recensement, comme un résident étranger ou une personne fictive, soit dénombrée à tort. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

En 1991, quatre études ont été entreprises afin d'évaluer les différents aspects de l'erreur de couverture. Premièrement, on a visité de nouveau un échantillon de logements classés comme inoccupés afin de vérifier s'ils étaient réellement inoccupés le iour du recensement. Les chiffres définitifs du recensement ont ensuite été corrigés pour tenir compte des personnes ou des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon de personnes dénombrées comme résidents temporaires afin de vérifier si elles avaient ou non été dénombrées à leur domicile habituel. À partir de cet échantillon, on a établi des estimations du nombre de personnes oubliées parce qu'elles étaient temporairement absentes de leur domicile habituel, puis on a rectifié les chiffres définitifs de population en conséquence. Malgré ces rectifications, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Une troisième étude, connue sous le nom de contre-vérification des dossiers, est réalisée pour déterminer l'importance de ce sous-dénombrement résiduel, pour le Canada dans son ensemble ainsi que pour chaque province et territoire, à l'occasion du recensement de 1991. Le sous-dénombrement tend à être plus élevé pour certains segments de la population comme les jeunes adultes de sexe masculin et les personnes récemment immigrées. La quatrième étude, connue sous le nom d'étude

surdénombrement, a pour objet d'étudier les erreurs de Ensemble. les résultats de surdénombrement. contre-vérification des dossiers et de l'étude du estimation fournissent du surdénombrement une sous-dénombrement net.

Autres erreurs non dues à l'échantillonnage

Alors que les erreurs de couverture ont une incidence sur le nombre d'unités comprises dans les divers univers du recensement, les autres erreurs influent sur les chiffres relatifs aux caractéristiques de ces unités.

Il est parfois impossible d'obtenir une réponse complète d'un ménage, même si le logement a été classé comme étant occupé et un questionnaire a été livré. Il se peut que les membres du ménage aient été absents pendant toute la période du recensement ou, en de rares occasions, que le membre responsable du ménage ait refusé de remplir le questionnaire. Il arrive plus souvent que le questionnaire soit retourné, mais qu'il y manque des données à certaines questions ou pour certaines personnes. Des efforts considérables sont déployés afin d'obtenir une réponse la plus complète possible. Les recenseurs contrôlent les questionnaires et assurent un suivi à l'égard de l'information manquante. Le travail du recenseur est ensuite vérifié tant par un surveillant que par un technicien du contrôle qualitatif. Malgré tout, il existe toujours un petit nombre de réponses manquantes à la fin de l'étape de la collecte. Bien que les entrées manquantes soient éliminées en cours de traitement en remplaçant chaque valeur manquante par la valeur correspondante figurant dans un enregistrement «similaire», il est possible que certaines erreurs de non-réponse s'y glissent. Cela est particulièrement grave lorsque les personnes non répondantes diffèrent des répondants sous certains aspects; en effet, cette procédure se traduira par l'introduction d'un biais de non-réponse.

Même lorsqu'une réponse est obtenue, il se peut qu'elle ne soit pas tout à fait exacte. Il est possible que le répondant ait mal interprété la question ou ait donné une réponse au jugé, surtout lorsqu'il répondait pour le compte d'un autre membre du ménage, qui était peut-être absent. Ces erreurs sont désignées sous le nom d'erreurs de réponse. Bien que ces erreurs surviennent d'ordinaire du fait que les répondants aient fourni des renseignements inexacts, elles peuvent aussi résulter d'erreurs commises par les recenseurs en remplissant certaines parties du questionnaire, comme le type de construction résidentielle, ou au moment du rappel effectué pour obtenir une réponse manquante.

Certaines questions du questionnaire du recensement nécessitent une réponse en lettres. Pendant le traitement, on attribue un code numérique à ces réponses. Il est possible que des **erreurs de codage** surviennent, surtout lorsque la liste de codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) et que la réponse écrite est ambiguë, incomplète ou difficile à lire. On limite le nombre d'erreurs de codage, sans toutefois l'éliminer complètement, en vérifiant un échantillon des codes et en prenant des mesures correctives au besoin. Pour la première fois en 1991, une grande partie des tâches de codage ont été automatisées afin, entre autres, de réduire le nombre d'erreurs de codage.

Les renseignements figurant dans les questionnaires sont introduits sur clavier dans un fichier informatique. Deux méthodes de résolution ordonnée sont utilisées pour limiter le nombre d'erreurs à la saisle des données. Dans un premier temps, certains contrôles (comme des vérifications d'étendue) sont effectués à mesure que les données sont entrées. Dans un second temps, on introduit de nouveau sur clavier un échantillon tiré de chaque lot de documents, puis on compare les entrées résultantes aux entrées initiales. Si le nombre d'erreurs relevées au sein des entrées initiales dépasse un seuil prédéterminé, on reprend l'introduction sur clavier des données de tout le lot de documents.

Une fois les données saisies, elles sont envoyées à Ottawa où elles sont soumises à une série de contrôles informatiques visant à relever les réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord définir ce que l'on entend par une réponse invalide. Les réponses invalides ou manquantes doivent ensuite être remplacées par des réponses valides, c'est-à-dire par des réponses qui sont compatibles avec les autres données figurant l'enregistrement. Dans un petit nombre de cas, il est possible de déduire la réponse correcte à partir des autres données de l'enregistrement. Toutefois, dans la majorité des cas, cela est impossible et on obtient une réponse valide à partir d'un enregistrement «donneur» prélevé au hasard parmi un groupe d'enregistrements cohérents qui sont pour un certain nombre de celles similaires à caractéristiques connexes l'enregistrement invalide. Bien sûr, rien ne garantit que la valeur imputée sera nécessairement identique à la réponse correcte pour la personne concernée. Cependant, pour autant que les enregistrements manquants ou invalides soient, en moyenne, similaires aux enregistrements valides, les erreurs à l'imputation s'annuleront plus ou moins une fois que les résultats auront été totalisés pour une région géographique ou un sous-groupe de population de taille suffisante.

Diverses études sont réalisées afin d'évaluer la qualité des réponses obtenues dans le cadre du recensement de 1991. Ainsi, on a calculé les taux de réponse et les taux de rejet au contrôle pour chaque question. Ces taux peuvent permettre de déterminer le potentiel de non-réponse et d'autres erreurs. De même, les totalisations établies à partir des données du recensement de 1991 ont été ou seront comparées avec les estimations correspondantes obtenues à partir des données des recensements précédents, des enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les registres des naissances et le cadastre municipal). Ces comparaisons peuvent permettre de cerner les problèmes de qualité éventuels ou, à tout le moins, de relever les divergences entre les sources.

Outre ces comparaisons entre données agrégées, certaines études de couplage de microdonnées sont actuellement menées afin de comparer les réponses de certains particuliers obtenues au recensement à celles d'une autre source de renseignements. Pour un certain nombre de caractéristiques «stables» (comme l'âge, le sexe, la langue maternelle, le lieu de naissance), on compare les réponses obtenues auprès d'un échantillon de personnes à l'occasion du recensement de 1991 aux réponses obtenues des mêmes personnes à l'occasion du recensement de 1986. De même, à la suite du recensement de 1991, un échantillon de personnes ont été dénombrées de

nouveau surtout pour déterminer les taux de surdénombrement. En même temps, cela a permis aux intervieweurs de poser une série de questions détaillées sur la langue, l'origine ethnique et l'état matrimonial; les réponses données à ces questions seront comparées aux réponses correspondantes du recensement afin de reconnaître les erreurs de réponse et tenter de les comprendre.

Erreurs d'échantillonnage

Les estimations obtenues en pondérant les réponses recueillies auprès d'un échantillon sont susceptibles d'être entachées d'erreurs en raison de la répartition des caractéristiques au sein de l'échantillon qui n'est généralement pas identique à la répartition correspondante au sein de la population dans laquelle l'échantillon a été prélevé.

L'erreur susceptible d'être introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique étudiée au sein de la population. Lorsque la valeur contenue dans la case est élevée, cette erreur sera relativement faible proportionnellement à cette valeur. Lorsque la valeur contenue dans la case est faible, cette erreur sera relativement importante proportionnellement à cette valeur.

L'erreur susceptible d'être introduite par l'échantillonnage est d'ordinaire exprimée sous forme d'«erreur type». Il s'agit de la racine carrée de la moyenne, calculée pour l'ensemble des échantillons de même taille prélevés selon le même plan d'échantillonnage, des carrés de l'écart de l'estimation obtenue à partir de l'échantillon par rapport à la valeur pour l'ensemble de la population.

Le tableau ci-dessous fournit des mesures approximatives de l'erreur type due à l'échantillonnage. Ces mesures sont données uniquement à titre indicatif.

Tableau : Erreur type approximative introduite par l'échantillonnage pour les données-échantillon du recensement de 1991

Valeur contenue dans la case	Erreur type approximative	
50 ou moins	15	
100	20	
200	30	
500	45	
1,000	65	
2,000	90	
5,000	140	
10,000	200	
20,000	280	
50,000	450	
100,000	630	
500,000	1400	

Les utilisateurs souhaitant déterminer l'erreur d'échantillonnage approximative pour une case de données dont la valeur a été obtenue à partir de l'échantillon de 20 % doivent choisir l'erreur type correspondant à l'entrée dans la colonne «Valeur contenue dans la case» ci-dessus qui se rapproche le plus de celle qui figure dans la case de données de la totalisation en cause. En utilisant la valeur ainsi obtenue pour l'erreur type, l'utilisateur peut, en général et à juste titre, être certain que la valeur réelle pour la population dénombrée (ne tenant pas compte des formes d'erreur autres que l'erreur d'échantillonnage) ne s'écarte pas de la valeur contenue dans la case dans une proportion supérieure ou inférieure à trois fois l'erreur type (p. ex., si la valeur contenue dans la case est 1,000, la fourchette à l'intérieur de laquelle se situe la valeur réelle serait de 1,000 \pm 3 \times 65 ou de 1,000 \pm 195).

Les erreurs types données dans le tableau ci-dessus ne s'appliquent pas aux totaux ou aux totaux partiels relatifs à la population ou aux univers (personnes, ménages, logements ou familles) pour la région géographique étudiée (voir Échantillonnage et pondération). On peut déterminer l'effet de l'échantillonnage pour ces valeurs en les comparant à celles des publications correspondantes contenant des données intégrales.

Il est à noter que l'effet du plan d'échantillonnage et de la méthode de pondération utilisés dans le cadre du recensement de 1991 variera d'une caractéristique à l'autre et d'une région géographique à l'autre. Il est donc possible que les valeurs de l'erreur type données dans le tableau ci-dessus sous-estiment ou surestiment l'erreur attribuable à l'échantillonnage.

Pour obtenir de plus amples renseignements sur la qualité des données du recensement, communiquer avec la Division des méthodes d'enquêtes sociales, Statistique Canada, Ottawa, Canada K1A 0T6, (613) 951-6940.

Confidentialité et arrondissement aléatoire

Afin de protéger le caractère confidentiel des renseignements fournis, les chiffres indiqués aux tableaux ont fait l'obiet d'un arrondissement aléatoire qui supprime toute possibilité d'associer des données statistiques à une personne facilement reconnaissable. Selon cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de 5 et dans certains cas, de 10. Cette technique assure une protection efficace contre la divulgation sans ajouter d'erreur significative dans les données du recensement. Cependant, elle entraîne certaines conséquences pour les utilisateurs. Comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis séparément dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages, qui sont calculés à partir de chiffres arrondis, ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont basées sur des données non La distorsion importante pouvant résulter de l'arrondissement aléatoire dans le cas des cases de faible valeur mérite aussi d'être signalée. Cette distorsion peut entraîner une perte de précision pour les cases de données renfermant des chiffres peu élevés.

Les utilisateurs devraient, lors de l'agrégation des données arrondies, être conscients de cette distorsion. Les erreurs dues à l'arrondissement ont tendance à s'annuler lorsque les chiffres contenus dans les cases sont agrégés de nouveau. Cependant, il est possible de réduire les distorsions en intégrant dans la mesure du possible les totaux partiels appropriés dans les totalisations.

Les utilisateurs désirant obtenir un maximum de précision peuvent aussi choisir de demander des totalisations personnalisées. Dans le cas de produits personnalisés, l'agrégation se fait à partir des enregistrements dans la base de données du recensement se rapportant aux particuliers. L'arrondissement aléatoire a lieu uniquement après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, comme la **suppression des régions**, afin d'assurer encore mieux la confidentialité des réponses des particuliers.

Dans le cadre de la **suppression des régions**, toutes les données caractéristiques se rapportant aux régions géographiques dont la population est inférieure à une taille donnée sont supprimées. L'importance de la suppression est fonction des facteurs suivants :

- si les données sont totalisées à partir d'une base de données intégrales, la suppression est fondée sur la population totale;
- si les données sont totalisées à partir d'une base de données-échantillon, la suppression est fondée sur la population excluant les pensionnaires d'établissements institutionnels;
- si les données renferment une répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 250 personnes;
- si les données ne renferment aucune répartition du revenu, on supprime les données relatives aux régions dont la population est inférieure à 40 personnes.

Dans tous les cas, les données supprimées sont incluses dans les totaux ou totaux partiels du niveau d'agrégation supérieur approprié.

Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les tableaux sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données-échantillon.

Échantillonnage et pondération

Les données du recensement de 1991 sont soit des données intégrales (c.-à-d. recueillies auprès de l'ensemble des ménages), soit des données-échantillon (c.-à-d. recueillies auprès d'un échantillon aléatoire de ménages) que l'on a pondérées pour obtenir des estimations pour l'ensemble de la population. Les données du présent rapport ont été recueillies

auprès d'un échantillon de 20 % et pondérées pour compenser pour l'échantillonnage. Tous les en-têtes de tableaux sont annotés en conséquence. On notera que, dans la plupart des réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de l'ensemble de la population.

Il est possible que, pour une région géographique donnée, le total ou le total partiel pondéré de la population, des ménages, des logements ou des familles diffère du chiffre correspondant figurant dans les publications contenant des données intégrales. Ces variations (en plus de l'effet de l'arrondissement aléatoire) sont attribuables à l'échantillonnage.

Notes spéciales

Chiffres de population basés sur la résidence habituelle

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada, de même que ceux qui sont considérés comme des «résidents non permanents» (voir le nota au sujet de ce groupe). Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

Réserves indiennes et établissements indiens partiellement dénombrés

Lors du recensement de 1991, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a été interrompu avant d'être mené à terme. De plus, certaines réserves indiennes et établissements indiens ont été dénombrés tardivement ou la qualité des données recueillies a été jugée insuffisante. Ces régions géographiques (un total de 78) sont appelées réserves indiennes et établissements indiens partiellement dénombrés.

Les données de 1991 ne sont pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un nota approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (p. ex., des variations en pourcentage) entre 1986 et 1991 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Une liste des réserves indiennes et établissements indiens partiellement dénombrés en cause ainsi que les chiffres de la population et des logements privés occupés des deux derniers recensements (si les données sont disponibles) a été dressée et est présentée à l'annexe 1.

Résidents non permanents

Pour la première fois en 1991, le recensement de la population inclut à la fois les résidents permanents et les résidents non permanents. Les résidents non permanents comprennent les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié.

Lors des recensements antérieurs, seuls les résidents permanents du Canada étaient inclus dans le recensement (exception faite pour 1941). Les résidents non permanents étaient considérés comme des résidents étrangers et n'étaient pas dénombrés.

Présentement au Canada, les résidents non permanents forment un segment croissant de la population. Leur présence peut avoir une influence sur la demande de services gouvernementaux tels que les soins de santé, l'éducation et les programmes d'emploi. L'inclusion des résidents non permanents au recensement de 1991 facilitera aussi la comparaison avec les statistiques provinciales et territoriales (mariages, divorces, naissances et décès) qui incluent cette population. En outre, la définition du recensement permet maintenant de mieux refléter la recommandation des Nations Unies, à savoir que les résidents à long terme (personnes demeurant dans un pays pour un an ou plus) soient dénombrés.

Le total des chiffres de population, de même que ceux de toutes les variables du questionnaire, seront touchés par ce changement à l'univers du recensement de 1991. D'après les résultats du recensement de 1991, il y avait 223 410 résidents non permanents au Canada, ce qui représente un peu moins de 1 % de la population totale. Les utilisateurs doivent faire preuve d'une très grande prudence lorsqu'ils comparent des données de 1991 avec celles de recensements antérieurs pour des régions géographiques où la concentration de résidents non permanents est importante. Celles-ci comprennent les principales régions métropolitaines de l'Ontario, de la Colombie-Britannique et du Québec. La répartition de la population des résidents non permanents pour les provinces, les territoires et les régions métropolitaines de recensement est présentée à l'annexe 2.

Même si tous les efforts possibles ont été déployés pour dénombrer les résidents non permanents, le dénombrement de cette population n'est pas aussi complet que celui des résidents permanents. Des facteurs tels que les problèmes linguistiques et la réticence à remplir un formulaire du gouvernement ou de comprendre l'utilité de leur participation peuvent avoir influé sur le dénombrement des résidents non permanents et s'être traduits par un sous-dénombrement.

Autres produits connexes

La gamme de produits du recensement de 1991 est conçue pour satisfaire les divers besoins de nos utilisateurs. Nous offrons une grande diversité de produits et services du recensement de la population de 1991. Ils sont divisés en cinq catégories.

- (1) Les produits de référence sont conçus pour faciliter l'utilisation des produits et des services; ils aident les utilisateurs à reconnaître leurs besoins, à trouver et à interpréter les données.
- (2) Les produits de données offrent un vaste éventail de données du recensement pour les régions géographiques normalisées sur les caractéristiques sociales, culturelles et économiques des Canadiens.
- (3) Les produits analytiques sont des publications qui expliquent les données du recensement de 1991 sur un grand nombre de thèmes ou de sujets, dont les résultats sont présentés dans un style facile à comprendre.
- (4) Le service des totalisations établit des totalisations pour les utilisateurs qui veulent des données sous une forme plus détaillée ou plus précise que ce que l'on trouve dans les publications normalisées.
- (5) On offre des ateliers et des séminaires aux nouveaux utilisateurs et aux utilisateurs actuels pour les informer sur les données du recensement et pour les aider à en tirer le maximum en fonction de leurs besoins.

Pour de plus amples renseignements sur les produits et services du recensement offerts, consultez le **Catalogue du recensement de 1991**, nº 92-302F au catalogue. Vous pouvez également contacter le centre régional de consultation le plus près indiqué à la section «Pour renseignements» de la présente publication.

Vous trouverez ci-après une liste d'autres produits ayant une présentation et un contenu semblables à cette publication. (Nota : Les publications ne sont pas toutes en vente. Il est toutefois possible de les consulter dans les centres régionaux de consultation ou les bibliothèques de dépôt.)

Autres produits de données sur la religion

Plusieurs autres produits du recensement de 1991 contiennent des données sur la religion. Ils sont :

Tableaux sommaires de base

Cette série est conçue pour répondre aux besoins des utilisateurs qui désirent étudier les caractéristiques des petites régions. Les tableaux donnent des renseignements sur une gamme de variables du recensement. Le tableau suivant sur la religion est disponible :

R9101 Population selon la religion, par groupe d'âge

Série << Profils de secteurs>>

Cette série donne un aperçu statistique (comprenant une variable de base pour la religion) de la population de régions géographiques détaillées dont les suivantes : divisions de recensement (DR), subdivisions de recensement (SDR), régions métropolitaines de recensement (RMR), agglomérations de recensement (AR), circonscriptions électorales fédérales (CÉF), régions urbaines et régions rurales, et secteurs de dénombrement (SD).

Série << Dimensions>>

Cette série présente des statistiques sur des sujets de grand intérêt public. Certaines des publications se penchent sur l'évolution des tendances, tandis que d'autres tracent le profil de sous-populations comme les groupes ethniques, les immigrants ou les groupes linquistiques.

94-311 Profil des groupes ethniques, 1991

Cette publication renferme un tableau portant sur certaines origines ethniques (uniques) recoupées selon la religion. Ce tableau contient plus de détails sur l'origine ethnique que le tableau fourni dans la présente publication.

94-312 Profil de la population des immigrants, 1991

Cette publication contient des données sur certaines caractéristiques (telles que la religion et la langue) de la population immigrante. Les données sont recoupées selon la période d'immigration et le sexe; des données sur la population non immigrante et les résidents non permanents sont aussi présentées.

94-318 Profil des groupes linguistiques, 1991

Cette publication établit le profil d'environ 20 groupes linguistiques définis selon la langue maternelle. Des renseignements sur la religion figureront probablement parmi les caractéristiques présentées.

Série <<Le Canada à l'étude>>

Cette série contient des publications analytiques et descriptives portant sur les caractéristiques sociales, économiques et démographiques actuelles de la population canadienne. Le but de la série est de présenter des textes et des résultats statistiques dans un style facile à lire.

96-314 Les religions au Canada : Le Canada à l'étude

Cette étude dresse un portrait des religions au Canada et fait état des tendances et des changements au niveau de la composition des groupes religieux.

Centres régionaux de consultation

Les centres régionaux de consultation de Statistique Canada offrent une gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter les différents produits, dont les publications, les disquettes de micro-ordinateurs, les microfiches et les cartes.

Le personnel des centres régionaux de consultation fournit des services de consultation et de recherche en plus du service après-vente, y compris des séminaires et des ateliers sur l'utilisation des données de Statistique Canada.

Chaque centre vous offre la possibilité d'extraire de l'information des systèmes d'extraction des données informatisés CANSIM et E-STAT de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les utilisateurs se trouvant à l'extérieur des secteurs d'appels locaux. Téléphonez, écrivez, télécopiez ou visitez le centre régional de consultation le plus près pour de plus amples renseignements.

Autres références et services

Vous pouvez vous procurer les publications de Statistique Canada dans les centres régionaux de consultation et dans les bibliothèques de dépôt, ou vous pouvez également les commander par l'entremise de votre librairie ou de votre agent d'abonnement. Pour obtenir une liste des points de vente au Canada, communiquez avec le centre régional de consultation le plus près, ou consultez le Catalogue du recensement de 1991 (nº 92-302F au catalogue).

Les distributeurs secondaires présentent à leurs clients des possibilités d'accès aux données et un soutien aux analyses grâce à une diversité de services de consultation et de services informatisés que n'offre pas Statistique Canada. Vous pouvez obtenir les noms et adresses des distributeurs autorisés dans un centre régional de consultation.

Statistique Canada offre des **produits géographiques numériques** qui permettent la manipulation informatique des données géographiques. Un service d'extraction des données personnalisé permet aux utilisateurs de délimiter eux-mêmes, s'ils le désirent, la région géographique qu'ils veulent étudier. La gamme de fichiers d'extraction des données et de services offre une grande flexibilité dans la sélection d'une base géographique.

Vous trouverez dans le Catalogue du recensement de 1991 (nº 92-302F au catalogue) la description complète des fichiers numériques et des services.

On peut obtenir des renseignements sur les produits et services du recensement de l'agriculture en consultant la publication Produits et services du recensement de l'agriculture de 1991, n° 92-303 au catalogue, ou en téléphonant sans frais au 1-800-465-1991.

Les utilisateurs qui ont besoin de données spéciales peuvent demander les services des enquêtes postcensitaires. Les données sont présentées sur disquettes pour micro-ordinateur pouvant être utilisées avec un programme de calcul de tableaux financiers ou sur support papier. Pour de plus amples renseignements, communiquez avec le centre régional de consultation le plus près.

Le système CANSIM de Statistique Canada, qui consiste en un réseau de bases de données informatisées et un service d'extraction des données, permet aux utilisateurs d'accéder aux statistiques actuelles et historiques de diverses façons, notamment grâce aux progiciels spécialisés de manipulation et d'analyse des données, aux ressources graphiques et au service de recherche bibliographique. Pour de plus amples renseignements sur le CANSIM, communiquez avec la Division de la commercialisation ou un centre régional de consultation.

Notes, Footnotes and Abbreviations

Note(s)

Comparison of the 1991 Census data with data from earlier censuses is affected by a change in the definition of the 1991 Census population. Persons in Canada on student authorizations, employment authorizations, Minister's permits, and as refugee claimants were enumerated in the 1991 Census but not in previous censuses. These persons are referred to as non-permanent residents. For further information, see the "Special Notes" section.

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- Nil or zero.
- † Excludes Census data for one or more incompletely enumerated Indian reserves or Indian settlements. For further information, see the "Special Notes" section.
- ¶ Incompletely enumerated Indian reserve or Indian settlement. For further information, see the "Special Notes" section.

Footnote(s)

- Refer to the note above on comparison of the 1991 Census data with data from earlier censuses.
- (2) Includes "Never attended school or attended kindergarten only".
- (3) Includes "Secondary school graduation certificate".
- (4) Includes persons with trades certificate with or without years of other non-university schooling.
- (5) The British only multiple category includes persons who report more than one of the following origins: English, Irish, Scottish, Welsh and Other British, n.i.e. In 1981, British only multiple responses were included in the single response British, n.o.s. In 1986 and 1991, these responses are listed as multiple responses.
- (6) To compare with the 1986 multiple category "British and other", combine the following multiple categories used in 1991: "British and Canadian", "British and other" and "British, Canadian and other".

Nota, Renvois et Abréviations

Nota

La comparaison des données du recensement de 1991 avec celles des recensements précédents est affectée par la modification apportée à la définition de la population du recensement de 1991. Les titulaires d'un permis de séjour pour étudiants, d'un permis de travail, d'un permis ministériel et les revendicateurs du statut de réfugié ont été dénombrés au recensement de 1991, mais ne l'ont pas été aux recensements antérieurs. Ces personnes sont des résidents non permanents. Pour plus de renseignements, voir la section «Notes spéciales».

- .. Nombres non disponibles.
- ... N'ayant pas lieu de figurer.
- Néant ou zéro.
- † Ne comprend pas les données du recensement pour une ou plusieurs réserves indiennes ou établissements indiens partiellement dénombrés. Pour plus de renseignements, voir la section «Notes spéciales».
- ¶ Réserve indienne ou établissement indien partiellement dénombré. Pour plus de renseignements, voir la section «Notes spéciales».

Renvoi(s)

- Reportez-vous à la note ci-dessus portant sur la comparaison des données du recensement de 1991 avec celles des recensements antérieurs.
- (2) Comprend "Aucune scolarité ou uniquement l'école maternelle".
- (3) Comprend «Certificat d'études secondaires».
- (4) Comprend les personnes avec un certificat d'une école de métiers avec ou sans d'autres études non universitaires.
- (5) La catégorie de réponse multiple «Britannique seulement» comprend les personnes qui ont déclaré plus d'une origine ethnique parmi les suivantes : «Anglais», «Irlandais», «Écossais», «Gallois» et «Autres Britanniques, n.i.a.». En 1981, les réponses multiples ne comprenant que des origines britanniques ont été incluses dans la catégorie de réponse unique «Britanniques, n.c.a.». En 1986 et en 1991, ces réponses sont indiquées comme réponses multiples.
- (6) Pour établir des comparaisons avec la catégorie de réponse multiple «Britannique et autres» du recensement de 1986, il faut combiner les catégories suivantes de réponses multiples du recensement de 1991 : «Britannique et Canadien», «Britannique et autres» et «Britannique, Canadien et autres».
